

# “INK” – The Blood of Printing Technology

Developing customised high performance inks for your next gen technology

## Why is our “Ink” so special?

UNSW can develop customized ink that it is printable and cost effective to meet your needs for next generation technology for both standard printers and 3D printers.

UNSW has rich experience to develop printable inks for large scale and cost effective industrial productions.

## What UNSW can offer

Our expertise allows us to develop high performance and customised metal, ceramic and polymer inks for your 3D printers. The UNSW School of Materials Science and Engineering is ranked number 1 in Australia and number 26 in the world.

We have a great track record in this space with two of the technologies already licenced to industries in Australia and China.
